The FTCA application for CY2018 states that applicants have to have a process to verify “health fitness, including physical and mental health status...” and how a CHC would define or otherwise verify that the health fitness is suitable for their CHC?

First the policy should define how the fitness statement is captured with questions from application or attesting to a statement. Then if they wish to proceed further they can require the provider to be seen by a physician either their own primary care provider or the medical director could provide a fit for duty type statement.

Do OSV consultants review charts for termed employees?

I've never experienced that before but I imagine they could since the employee was covered FTCA wise and/or treated patients while under their employ.
