### Operations and Staff

- Health Center Weekly Visits Compared to Pre-COVID-19 Weekly Visits | 71.48% | 75.51% |
- % of Health Center Sites Temporarily Closed | 37 | 1.00% |
- Staff Tested Positive for COVID-19, Virus Detection (PCR, antigen) | 20 | 609 |
- Average Percent of Health Center Visits Conducted Virtually | 6.29% | 94.90% |

*Only health centers that responded having COVID-19 testing capacity are included, n=45.*

*The reported number of patients tested do not represent the same patients included in the reported number of patients tested positive due to a lag between the date the specimen is collected and the availability of test results. Positivity rates cannot be inferred by dividing patients tested positive by patients tested for this reason.*

*Any test type* includes virus detection and antibody detection testing numbers. Care should be taken when drawing conclusions from combined testing numbers or in racial/ethnic minority percentages. Comparison of data in later weeks or in racial and/or ethnic minorities is subject to interpretation as the nature and purpose of antibody detection tests evolve over time.

*Percentages may not add to 100% due to rounding to the hundredths.

*Includes Hispanic/Latino and Non-Hispanic/Latino.

*Data represents information provided by health centers funded through H80 grants from a single, specified reporting date as indicated above. Summary information across report dates is not comparable due to differences in which health centers responded for a given report date.*
